INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/FR2004/001014

Rox	No. V Reasoned state citations and ex	ent under Article 35(2) with rega lanations supporting such statem	rd to novelty, inventive step or industrial applicability;
1.	Statement	The state of the s	Cut
	Novelty (N)	Claims 1-20	
		Claims	YES
			NO NO
	Inventive step (IS)	Claims 1-20	
		Claims	YES
	•		NO NO
	Industrial applicability (IA)	Claims 1-20	
		Claims	YES
			NO

- 2. Citations and explanations (Rule 70.7)
 - The cited documents do not contain all of the features in the independent claim. It follows that the subject matter of the claim is novel.
 - 2. Document DE A 4105246 (D1), which is considered to be the closest prior art, describes an electrically powered self-contained vehicle requiring a heavy and/or large batteries to supply power thereto, which batteries are supported by a separate frame insertable into a housing provided under the vehicle chassis, wherein connection means are provided between the battery frame and the vehicle chassis, said connection means include locking means operable between the battery frame and the vehicle chassis, as well as an interface on the battery frame side and an interface on the vehicle chassis side including power and/or instruction and/or data transmission sockets.
 - 3. The problem to be solved can thus be considered to be the tilting of the vehicle chassis relative to the trailer when going around a bend, with the result that strong forces are exerted on the

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

transverse trailer guide device.

- 4. This problem is solved by the present application, which provides said interfaces with matching projection and socket portions, a centring member and a coupling member, wherein the interface on the vehicle chassis side consists of a plate separate therefrom and connected thereto at at least three points, of which two are controlled by hydraulic cylinders while the third is in the form of a ball joint.
- 5. These features are not known from the prior art and including them in the vehicle known from D1 is not obvious. Therefore, the present application is considered to involve an inventive step (PCT Article 33(3)).
- Claims 2 to 20 are dependent on the independent 6. claim and thus also comply, as such, with the requirements of novelty and inventive step of the PCT.
